What the numbers say

Nine months against the same period last year

68%

of registered readers came in at least once

September brought the busiest month of the year: 6,800 visits, a third of them on the three Saturdays after the school year started. The reading rooms ran at capacity twice.

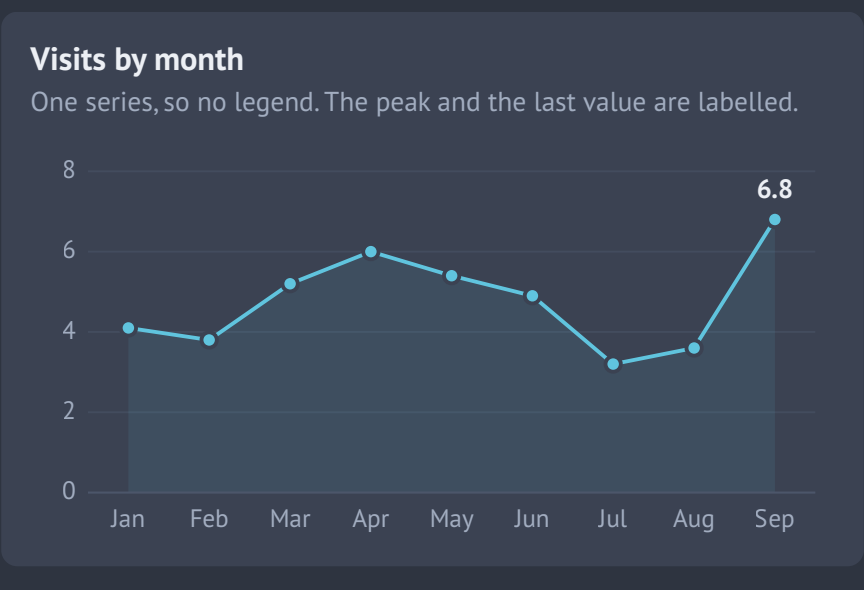

Growth did not come from events. Attendance at readings and workshops stayed flat at roughly 400 people a month, while ordinary weekday visits rose by a fifth.

What this costs. Two of the four reading rooms have no free seats after 16:00 on weekdays. Until that changes, further growth in visits turns into queueing, not into loans.

02

Visits

Thousands of visits per month

03

What people borrow

Share of loans by shelf

Fiction and children's books make up 62% of everything borrowed. The science shelf grew fastest – up 40% – from the smallest base of the three.
